

Usability evaluation & testing

Nils-Erik Gustafsson

nils-erik@it-arkitekterna.se
gui@cmpmail.com

© 2008 Nils-Erik Gustafsson

Methods

- *Evaluation*
- *Testing*
- *Observation*
- Survey
- Focus group discussion
- Logging
- User feedback

© 2008 Nils-Erik Gustafsson

Evaluation

- *Heuristic evaluation*
Expert reviewer(s) critique a system to determine conformance with a short list of design heuristics
- *Consistency inspection*
Expert(s) verify consistency, checking e.g., terminology, colour, layout
- *Cognitive walkthrough*
Expert(s) simulate users walking through the system, performing typical tasks

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 1

1. **Visibility of system status**
 - The system should always keep users informed about what is going on, through appropriate feedback within reasonable time.
2. **Match between system and the real world**
 - The system should speak the users' language, with words, phrases and concepts familiar to the user, rather than system-oriented terms. Follow real-world conventions, making information appear in a natural and logical order.

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 2

3. **User control and freedom**
 - Users often choose system functions by mistake and will need a clearly marked "emergency exit" to leave the unwanted state without having to go through an extended dialogue. Support undo and redo.
4. **Consistency and standards**
 - Users should not have to wonder whether different words, situations, or actions mean the same thing. Follow platform conventions.

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 3

5. **Error prevention**
 - Even better than good error messages is a careful design which prevents a problem from occurring in the first place.
6. **Recognition rather than recall**
 - Make objects, actions, and options visible. The user should not have to remember information from one part of the dialogue to another. Instructions for use of the system should be visible or easily retrievable whenever appropriate.

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 4

7. Flexibility and efficiency of use
 - Accelerators – unseen by the novice user – may often speed up the interaction for the expert user such that the system can cater to both inexperienced and experienced users. Allow users to tailor frequent actions.
8. Aesthetic and minimalist design
 - Dialogues should not contain information which is irrelevant or rarely needed. Every extra unit of information in a dialogue competes with the relevant units of information and diminishes their relative visibility.

© 2008 Niels Erik Gustafsson

Nielsen's heuristics 5

9. Help users recognize, diagnose, and recover from errors
 - Error messages should be expressed in plain language (no codes), precisely indicate the problem, and constructively suggest a solution.
10. Help and documentation
 - Even though it is better if the system can be used without documentation, it may be necessary to provide help and documentation. Any such information should be easy to search, focused on the user's task, list concrete steps to be carried out, and not be too large.

© 2008 Niels Erik Gustafsson

Gustafsson's heuristics 1

Are terms and symbols used consistently?

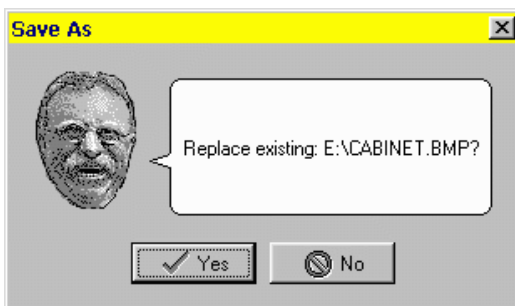

© 2008 Niels Erik Gustafsson

1 Consistency

© 2008 Niels Erik Gustafsson

1 Consistency

© 2008 Niels Erik Gustafsson

Gustafsson's heuristics 2

Is the required information readily available?
The required functions?

© 2008 Niels Erik Gustafsson

2 Required info/functions

© 2008 Nil-Erik Gustafsson

2 Required info/functions

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 3

Where am I?

- What is the name of the application, the object (if any), and the operation?
- What is happening?

© 2008 Nil-Erik Gustafsson

3 Where am I?

© 2008 Nil-Erik Gustafsson

3 Name of operation?

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 1

What can I do?

- Which operations are possible to perform?

© 2008 Nil-Erik Gustafsson

4 What can I do?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 5

Is all the required information *where* I need it?

© 2008 Niklas Erik Gustafsson

5 Information *where* I need it?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 6

Can I go back one step in the interaction and undo the previous operation?

© 2008 Niklas Erik Gustafsson

6 Undo?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 7

Can I interrupt and quit the application without losing information?

© 2008 Niklas Erik Gustafsson

7 Interrupt & quit without loss?

Gustafsson's heuristics 8

Is the information sensibly grouped?
(Menus, windows, etc.)

© 2008 Nil-Erik Gustafsson

8 Info sensibly grouped

Gustafsson's heuristics 9

Are graphical elements such as colour and lines used
in a subtle and consistent manner?

© 2008 Nil-Erik Gustafsson

9 Subtle & consistent

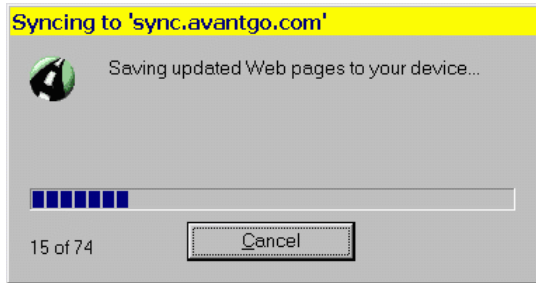

Gustafsson's heuristics 10

Are response times reasonable (from the user's point
of view)?
Do I get the right type of feedback?

© 2008 Nil-Erik Gustafsson

10 Response time/feedback

© 2008 Nils-Erik Gustafsson

Gustafsson's heuristics 11

Don't be funny!

© 2008 Nils-Erik Gustafsson

11 Don't be funny!

© 2008 Nils-Erik Gustafsson

11 Don't be funny!

© 2008 Nils-Erik Gustafsson

Usability testing/review

Nils-Erik Gustafsson

nils-erik@it-arkitekterna.se
gui@cmpmail.com

© 2008 Nils-Erik Gustafsson

Usability testing

- Users
- Tasks
- Scenarios
- Usability requirements

© 2008 Nils-Erik Gustafsson

Before

- *Always* start with expert review(s)
- *Always* run pilot test(s) (rehearsal)

© 2008 Nielsen-Esk. Gustafson

Know thy users!

- Identify & describe user categories
- Find representative users
- Quality vs. quantity

© 2008 Nielsen-Esk. Gustafson

Perfect vs. “Good enough”

© 2008 Nielsen-Esk. Gustafson

Perfect vs. “Good enough”

© 2008 Nielsen-Esk. Gustafson

Identify usability requirements

- Completion rate
- Success rate
- **Task time**
- Learnability (task time improvement)
- Retention
- Satisfaction

© 2008 Nielsen-Esk. Gustafson

What to aim for

- Optimal level (benchmark)
- Present level (manual/old system)
- **Desired level**
- Worst acceptable level

© 2008 Nielsen-Esk. Gustafson

Consider

- Go to users/Let users come to you
- User's own workplace/Laboratory

- Pen & paper/Video equipment

© 2008 Niko Erik Gustafsson

LoFi vs. HiFi prototype

- Price
- Iteration speed
- Dynamics (response time)
- Democracy
- Expectations
- Fun & creativity

© 2008 Niko Erik Gustafsson

LoFi vs. HiFi logging

- Price
- Ease of use
- Portability
- Malfunction
- Influence
- Symbolic value

© 2008 Niko Erik Gustafsson

Who does what?

- Test leader
- Secretary (paper/logging software)
- Video technician
- Concerned parties (designers, etc.)

© 2008 Niko Erik Gustafsson

Intro

- Introduce everyone & break the ice
- Explain purpose & procedure
- Get written agreement to record audio/video
- Get relevant background info.
- Introduce system, if suitable

© 2008 Niko Erik Gustafsson

“Association test” (Gustafsson)

- Show system *without* any prior info.
- Ask user to explore & describe

- “Think aloud” vs. collaboration

© 2008 Niko Erik Gustafsson

Perform tasks

- OK to interrupt, give up, ask for help
- Keep track of time
- Document everything/Annotate copies
- Paper/Screen
- Face
- Printed matter (User's guide, etc.)

© 2008 Nilu-Erik Gustafsson

Outro

- Review notes/Annotations/Video(?)
- Questions & comments
- Subjective rating (away from system!)

- Reward?

© 2008 Nilu-Erik Gustafsson

Afterwards

- Review: Notes/Annotations/Video
- Stop & iterate design or continue?

- Prepare "highlights"
- Analysis
- Report?

© 2008 Nilu-Erik Gustafsson

Afterwards

- Quick review of Notes/Annotations/Video
- Stop & iterate design or continue?

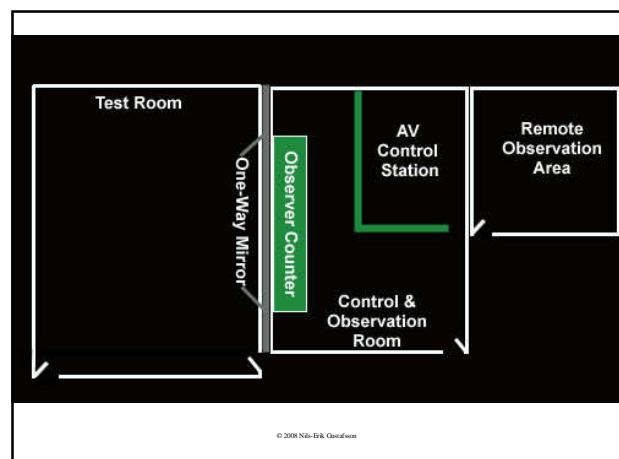

- Prepare "highlights"
- Analysis
- Report?

© 2008 Nilu-Erik Gustafsson

Reactions

- *Denial*: "This feature is important. Without it, users won't find what they need."
- *Anger*: "The users are stupid!"
- *Bargaining*: "Can't we provide more training? Then they would understand it."
- *Depression*: (Silence...)
- *Acceptance*: "Let's fix this!"

© 2008 Nilu-Erik Gustafsson

© 2008 Nilu-Erik Gustafsson

SunSoft Usability Labs

Offers usability evaluations and design services to Sun customers and invites volunteers to evaluate future Sun products.

© 2008 Niels-Erik Gestblom

© 2008 Niels-Erik Gestblom

© 2008 Niels-Erik Gestblom

© 2008 Niels-Erik Gestblom

© 2008 Niels-Erik Gestblom

Pros & cons

- Evaluation
 - + Quick, cheap
 - Expertise

- Testing
 - + Persuasive, terminology
 - Slow, expensive, expertise

© 2008 Niels-Erik Gestblom

4. **Consistency and standards**
 - Users should not have to wonder whether different words, situations, or actions mean the same thing. Follow platform conventions.

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 3

5. **Error prevention**
 - Even better than good error messages is a careful design which prevents a problem from occurring in the first place.
6. **Recognition rather than recall**
 - Make objects, actions, and options visible. The user should not have to remember information from one part of the dialogue to another. Instructions for use of the system should be visible or easily retrievable whenever appropriate.

© 2008 Nils-Erik Gustafsson

Nielsen's heuristics 4

7. Flexibility and efficiency of use
 - Accelerators – unseen by the novice user – may often speed up the interaction for the expert user such that the system can cater to both inexperienced and experienced users. Allow users to tailor frequent actions.
8. Aesthetic and minimalist design
 - Dialogues should not contain information which is irrelevant or rarely needed. Every extra unit of information in a dialogue competes with the relevant units of information and diminishes their relative visibility.

© 2008 Niels Erik Gustafsson

Nielsen's heuristics 5

9. Help users recognize, diagnose, and recover from errors
 - Error messages should be expressed in plain language (no codes), precisely indicate the problem, and constructively suggest a solution.
10. Help and documentation
 - Even though it is better if the system can be used without documentation, it may be necessary to provide help and documentation. Any such information should be easy to search, focused on the user's task, list concrete steps to be carried out, and not be too large.

Gustafsson's heuristics 1

Are terms and symbols used consistently?

© 2008 Niels Erik Gustafsson

1 Consistency

© 2008 Niels Erik Gustafsson

1 Consistency

© 2008 Niels Erik Gustafsson

Gustafsson's heuristics 2

Is the required information readily available?
The required functions?

© 2008 Niels Erik Gustafsson

2 Required info/functions

© 2008 Nil-Erik Gustafsson

2 Required info/functions

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 3

Where am I?

- What is the name of the application, the object (if any), and the operation?
- What is happening?

© 2008 Nil-Erik Gustafsson

3 Where am I?

© 2008 Nil-Erik Gustafsson

3 Name of operation?

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 1

What can I do?

- Which operations are possible to perform?

© 2008 Nil-Erik Gustafsson

4 What can I do?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 5

Is all the required information *where* I need it?

© 2008 Niklas Erik Gustafsson

5 Information *where* I need it?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 6

Can I go back one step in the interaction and undo the previous operation?

© 2008 Niklas Erik Gustafsson

6 Undo?

© 2008 Niklas Erik Gustafsson

Gustafsson's heuristics 7

Can I interrupt and quit the application without losing information?

© 2008 Niklas Erik Gustafsson

7 Interrupt & quit without loss?

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 8

Is the information sensibly grouped?
(Menus, windows, etc.)

© 2008 Nil-Erik Gustafsson

8 Info sensibly grouped

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 9

Are graphical elements such as colour and lines used
in a subtle and consistent manner?

© 2008 Nil-Erik Gustafsson

9 Subtle & consistent

© 2008 Nil-Erik Gustafsson

Gustafsson's heuristics 10

Are response times reasonable (from the user's point
of view)?
Do I get the right type of feedback?

© 2008 Nil-Erik Gustafsson

10 Response time/feedback

© 2008 Nils-Erik Gustafsson

Gustafsson's heuristics 11

Don't be funny!

© 2008 Nils-Erik Gustafsson

11 Don't be funny!

© 2008 Nils-Erik Gustafsson

11 Don't be funny!

© 2008 Nils-Erik Gustafsson

Usability testing/review

Nils-Erik Gustafsson

nils-erik@it-arkitekterna.se
gui@cmpmail.com

© 2008 Nils-Erik Gustafsson

Usability testing

- Users
- Tasks
- Scenarios
- Usability requirements

© 2008 Nils-Erik Gustafsson

Before

- *Always* start with expert review(s)
- *Always* run pilot test(s) (rehearsal)

© 2008 Nielsen-Esk. Gustafson

Know thy users!

- Identify & describe user categories
- Find representative users
- Quality vs. quantity

© 2008 Nielsen-Esk. Gustafson

Perfect vs. “Good enough”

© 2008 Nielsen-Esk. Gustafson

Perfect vs. “Good enough”

© 2008 Nielsen-Esk. Gustafson

Identify usability requirements

- Completion rate
- Success rate
- **Task time**
- Learnability (task time improvement)
- Retention
- Satisfaction

© 2008 Nielsen-Esk. Gustafson

What to aim for

- Optimal level (benchmark)
- Present level (manual/old system)
- **Desired level**
- Worst acceptable level

© 2008 Nielsen-Esk. Gustafson

Consider

- Go to users/Let users come to you
- User's own workplace/Laboratory

- Pen & paper/Video equipment

© 2008 Niko Erik Gustafsson

LoFi vs. HiFi prototype

- Price
- Iteration speed
- Dynamics (response time)
- Democracy
- Expectations
- Fun & creativity

© 2008 Niko Erik Gustafsson

LoFi vs. HiFi logging

- Price
- Ease of use
- Portability
- Malfunction
- Influence
- Symbolic value

© 2008 Niko Erik Gustafsson

Who does what?

- Test leader
- Secretary (paper/logging software)
- Video technician
- Concerned parties (designers, etc.)

© 2008 Niko Erik Gustafsson

Intro

- Introduce everyone & break the ice
- Explain purpose & procedure
- Get written agreement to record audio/video
- Get relevant background info.
- Introduce system, if suitable

© 2008 Niko Erik Gustafsson

“Association test” (Gustafsson)

- Show system *without* any prior info.
- Ask user to explore & describe

- “Think aloud” vs. collaboration

© 2008 Niko Erik Gustafsson

Perform tasks

- OK to interrupt, give up, ask for help
- Keep track of time
- Document everything/Annotate copies
- Paper/Screen
- Face
- Printed matter (User's guide, etc.)

© 2008 Nilu-Erik Gustafsson

Outro

- Review notes/Annotations/Video(?)
- Questions & comments
- Subjective rating (away from system!)

- Reward?

© 2008 Nilu-Erik Gustafsson

Afterwards

- Review: Notes/Annotations/Video
- Stop & iterate design or continue?

- Prepare "highlights"
- Analysis
- Report?

© 2008 Nilu-Erik Gustafsson

Afterwards

- Quick review of Notes/Annotations/Video
- Stop & iterate design or continue?

- Prepare "highlights"
- Analysis
- Report?

© 2008 Nilu-Erik Gustafsson

Reactions

- *Denial*: "This feature is important. Without it, users won't find what they need."
- *Anger*: "The users are stupid!"
- *Bargaining*: "Can't we provide more training? Then they would understand it."
- *Depression*: (Silence...)
- *Acceptance*: "Let's fix this!"

Pros & cons

- Evaluation
 - + Quick, cheap
 - Expertise

- Testing
 - + Persuasive, terminology
 - Slow, expensive, expertise

© 2008 Niels-Erik Gestblom
